UNIVERSITY

FACULTY OF ENGINEERING

ELECTRICAL-ELECTRONICS ENGINEERING

Message from the Department Head

You are in the right hands on your journey to becoming a qualified and well-equipped Electrical-Electronics Engineer who can adapt to new developments. You will receive theoretical and applied courses in accordance with the Electrical-Electronics Engineering competency frameworks and the expectations of industry and the public sector. You can work and develop yourself in a wide range of fields, including analysis and design programs, mechanical, robotics, control, automation, software and hardware design for intelligent systems, electric power generation, distribution and transmission, electronic circuit design, communication and medical systems. Our aim is to train Electrical-Electronics Engineers who have a strong engineering background, can

provide effective analytical solutions to the professional problems they encounter, are open to teamwork and interdisciplinary work, have good communication skills, are reliable, competent and self-confident, have a developed sense of quality, and have professional and ethical responsibilities.

Professor Ali Özen
