UNIVERSITY

FACULTY OF AERONAUTICS AND ASTRONAUTICS

AEROSPACE ENGINEERING

Dear Students,

The aerospace and defense industry has been rapidly advancing in recent years, both globally and in our country, and is becoming increasingly popular day by day. This evolving and needs-driven industry clearly highlights the importance of Aerospace Engineering.

Our department is designed to provide you with a solid foundation in this exciting field. In addition to fundamental courses such as aerodynamics, propulsion systems, structures and materials, flight mechanics and control, you will also have the opportunity to develop your theoretical and applied skills through technical elective courses that you can choose according to your interests.

Our goal is to train you to become the sought-after engineers of our country's leading aerospace, space and defense industry companies after graduation, not only with the knowledge you gain in the classroom, but also by putting it into practice through school clubs, summer internships and national/international competitions.

We would be delighted to see you among us with our young and dynamic academic staff who have international education and teaching experience. We invite all students who believe that the future is in the skies and want to make a difference in this exciting field to our Aerospace Engineering department.

Let's fly to the skies together!

Associate Professor Muharrem Kunduracı

Head of Department
