

TARSUS
UNIVERSITY

Dear Valued Students,

When we view the aviation sector as a system undergoing continuous change and development, we observe that it is comprised of subsystems such as high-tech aircraft, massive airport facilities, airlines with diverse business models, national/international regulatory authorities, aircraft maintenance facilities, and air traffic services. All of these subsystems work in interaction for air transportation to materialize, and at the heart of all of them lies aviation personnel who ensure that air transportation is conducted safely, securely, economically, and sustainably.

In every operation carried out in aviation, there is a communication between humans and technology. Establishing this communication with safety, reliability, and efficiency at the forefront will ensure that the system operates with near-zero errors.

As the Tarsus University Aviation Management Department, our primary goal is to cultivate qualified human resources equipped with the appropriate knowledge and skills required by the aviation industry through theoretical courses and applications. As a newly established department of a dynamic university, our priority is to academically develop you throughout your university education and prepare you for the world of civil aviation. It is important for us to know that we will provide you with all kinds of support on your development path.

With wishes for success and happiness,

Associate Professor Dilek Erdoğan

Head of Department
