

FACULTY OF APPLIED SCIENCES

INTERNATIONAL TRADE AND LOGISTICS

Dear Students,

In today's competitive global business world, businesses in all sectors must take steps to turn competition into an opportunity. For businesses, infrastructure and technology are easily imitable features. However, human resources that can effectively and efficiently use technology and equipment cannot be easily imitated. Therefore, there is a need for educated and equipped human resources in the foreign trade and logistics sector for the advancement and development of the sector.

The curriculum of the Department of International Trade and Logistics at Tarsus University is prepared in accordance with the opinions of internal and external stakeholders and current needs. Our curriculum includes

many courses that will contribute to your professional life, primarily marketing, warehousing, transportation, import and export, customs, business, and professional foreign languages. With the compulsory internship practice, our students can gain a lot of experience in the sector before they graduate. Students are offered educational opportunities abroad with the Erasmus and Mevlana exchange programs and in Turkey with the Farabi program. In addition, projects that will increase the competitiveness of the sector are produced through the University-Public and Private Sector Cooperation provided by the International Trade and Logistics Application and Research Center.

In addition to undergraduate education, graduate education is also provided in the Department of International Trade and Logistics. The department, which started accepting doctoral students in the 2019-2020 academic year, is one of the few state universities in Turkey that provides doctoral education in this field.

The curriculum of the Department of International Trade and Logistics, cooperation with the sector, exchange programs, and postgraduate education opportunities aim to train professionals who have the necessary knowledge and equipment in international trade and logistics, closely follow opportunities, are open to all kinds of innovation, are researchers, have a sense of social responsibility and respect for ethical values, add value to the people and institutions they work with, and are experts in their fields.

Professor Sezen Bozyiğit

Head of Department
